Simmer

Our goal is to make recipes around the world known to all. Using Kotlin we created a mobile app that gives access to recipes from China to Hungary. The app collects information from a database and throws it onto the specified recipe pages for you to view. There is also a feature that allows users to add recipes to the database from the app. Cannot wait to show you what we've cooked up!

Mobile App

User Experience Design/ Prototyping

Big Paper for Lo-Fi prototypes

Figma for Hi-Fi prototypes

User Interface: Front-End

XML in Android-Studio

Business Logic: Back-End

Kotlin

Database

PHP and MySQL

Website

User Experience Design/ Prototyping

Big Paper for Lo-Fi prototypes

Figma for Hi-Fi prototypes

User Interface: Front-End

HTML, CSS3, Java Script

Business Logic: Back-End

PHP

Database

Apache web-server (localhost server) and MySQL
